Technical Skills

Strong: JavaScript • React • Redux • AngularJS • Node.js • ElasticSearch • Firebase • Git • jQuery • HTML • CSS
Experienced: Express.js • Backbone.js • MongoDB • Mocha/Chai • Heroku • D3.js • Socket.IO • SQL • Hapi • RethinkDB

Professional Experience

Gather Technologies | Software Developer 2016 - Present

- Implemented an interactive and responsive Customer Portal to allow Gather's venues and guests to coordinate, send and sign event proposals, send messages, make payments, view menus and charges, and view critical event details.
- Added customizable export builder to allow our venues to view important details about their business and created advanced searching and filtering based on the data

Cox Media Group | Senior Web Developer (Contractor) 2016

- Built out a configurable TV News website with reusable and modular components so that producers and content creators can easily manage the site's layout and content in a new Content Management System (CMS)
- Constructed user log-in and member center so content consumers can manage their profile and newsletter subscriptions
- Implemented and extended a new video player's functionality to give producers flexibility on how to display video to end users

Hack Reactor | Hacker in Residence 2015 - 2016

- Provided students with guidance on how to approach technical and interpersonal challenges
- Responsible for vetting potential students to make sure they have the technical and interpersonal skills necessary to be successful in a course with a 3% acceptance rate

Software Engineering Projects

CritterJoy | Full Stack Engineer and Product Owner | <http://critterjoy.com>

Daily source of aww - trending photos and gifs from the web and posted directly

- Created trending engine that regularly calculates and sorts for the most popular photos and gifs
- Build out live comment section and like buttons so users can see what is said in real time
- Integrated with photo service to efficiently serve photos optimized by screen size for performance

TippUs | Full Stack Engineer and Product Owner | <http://tipp-us.github.io/>

Web app that allows people to easily find and tip local artists and musicians with their phones

- Architected front end design using Angular framework to create seamless single page application
- Led team to focus on a clean mobile-first interface for users to have compelling and intuitive experiences

SpeechChat | Lead Full Stack Engineer | <http://speechchat.herokuapp.com/>

Speech to Text Chat Room with instant translation support for multiple input and output languages

- Architected chat room Express.js server utilizing socket.io to communicate dictated messages
- Enabled Google Language Translator functionality to allow for seamless translation services

Education

Hack Reactor | Advanced Software Engineering Immersive 2015

University of Georgia | Bachelor of Business Administration in Finance 2008
